

## Portable ultrasonic flowmeter for gas, steam and liquids in hazardous areas

Portable instrument for non-invasive, quick ultrasonic flow measurement with clamp-on technology for all types of piping

### Features

- Configurable as multifunctional measuring system:
  - Flow measurement of gases, compressed air and saturated steam up to max. 180 °C
  - Flow and thermal energy measurement of liquids
- Precise bidirectional and highly dynamic flow measurement with the non-invasive clamp-on technology
- Automatic loading of calibration data and transducer detection for a fast and easy set-up (less than 5 min), providing precise and long-term stable results
- High precision at fast and slow flow rates, high temperature and zero point stability
- Portable, easy-to-use flow transmitter with 2 flow channels, multiple inputs/outputs, an integrated data logger with a serial interface
- Water tight; resistant against oil, many liquids and dirt
- Extremely resistant carbon fiber housing
- Robust, water-tight (IP67) transport case with comprehensive accessories
- Compact and very lightweight, allowing the measuring system to be easily carried as personal luggage, e.g. for offshore visits
- Covered by ATEX/IECEx zone 2 certification
- Li-Ion battery provides up to 25 hours of measurement operation
- User-friendly design
- QuickFix for a simple and fast transmitter fixation, e.g. on pipes
- Transducers available for a wide range of inner pipe diameters and fluid temperatures
- Rugged transducers (ATEX/IECEx zone 1 and 2, resistant to rough environments, dust and humidity)

### Applications

Designed for the following industries:

- Upstream (on- and offshore)
- Midstream and downstream (pipelines and refineries)
- Chemical industry
- Energy sector (e.g. HVAC, geothermal, power plants)

## Function

### Measurement principle

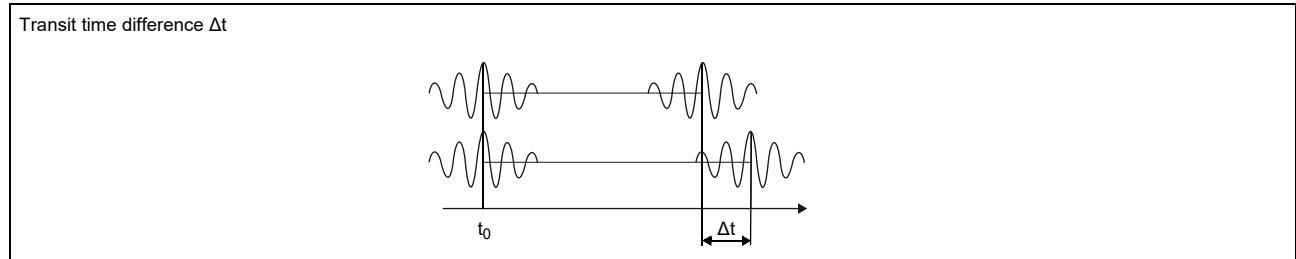

The transducers are mounted on the pipe which is completely filled with the fluid. The ultrasonic signals are emitted alternately by a transducer and received by the other. The physical quantities are determined from the transit times of the ultrasonic signals.

As the fluid where the ultrasound propagates is flowing, the transit time of the ultrasonic signal in flow direction is shorter than the one against the flow direction.

The transit time difference  $\Delta t$  is measured and allows the flowmeter to determine the average flow velocity along the propagation path of the ultrasonic signals. A flow profile correction is then performed in order to obtain the area averaged flow velocity, which is proportional to the volumetric flow rate.

The integrated microprocessors control the entire measuring cycle. The received ultrasonic signals are checked for measurement usability and evaluated for their reliability. Noise signals are eliminated.

### Calculation of volumetric flow rate

$$\dot{V} = k_{Re} \cdot A \cdot k_a \cdot \frac{\Delta t}{2 \cdot t_y}$$

where

- $\dot{V}$  - volumetric flow rate
- $k_{Re}$  - fluid mechanics calibration factor
- $A$  - cross-sectional pipe area
- $k_a$  - acoustical calibration factor
- $\Delta t$  - transit time difference
- $t_y$  - average of transit times in the fluid

## Calculation of mass flow rate

The mass flow rate is calculated from the operating density and the volumetric flow rate:

$$\dot{m} = \rho \cdot \dot{V}$$

The operating density of the fluid is calculated as the function of pressure and temperature of the fluid:

$$\rho = f(p, T)$$

where

$\rho$  - operating density

$p$  - fluid pressure

$T$  - fluid temperature

$\dot{m}$  - mass flow rate

$\dot{V}$  - volumetric flow rate

## Calculation of standard volumetric flow rate

The standard volumetric flow rate can be selected as physical quantity. It is calculated with the following formula:

$$\dot{V}_N = \dot{V} \cdot \frac{p}{p_N} \cdot \frac{T_N}{T} \cdot \frac{1}{K}$$

where

$\dot{V}_N$  - standard volumetric flow rate

$\dot{V}$  - operating volumetric flow rate

$p_N$  - standard pressure (absolute value)

$p$  - operating pressure (absolute value)

$T_N$  - standard temperature in K

$T$  - operating temperature in K

$K$  compressibility coefficient of gas: ratio of the compressibility factors of the gas at operating conditions and at standard conditions  $Z/Z_N$

The operational pressure  $p$  and the operational temperature  $T$  of the fluid will be entered directly as fixed values into the transmitter. If temperature inputs are installed (optional), the temperature can be measured by the customer and fed in the transmitter.

The gas compressibility coefficient  $K$  of the gas is entered in the transmitter:

- as fixed value or
- as approximation, e.g. according to AGA8 or GERG

## Number of sound paths

The number of sound paths is the number of transits of the ultrasonic signal through the fluid in the pipe. Depending on the number of sound paths, the following methods of installation exist:

- **reflection arrangement**

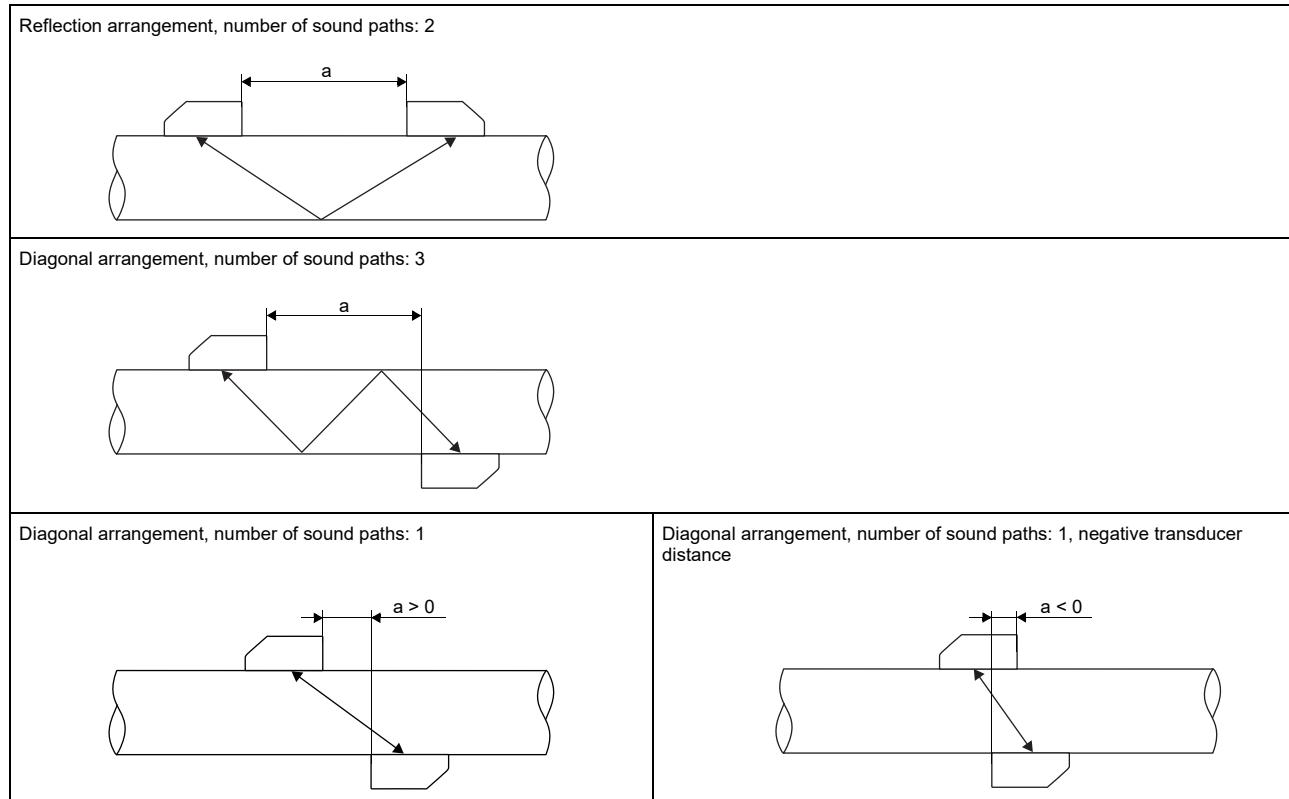

The number of sound paths is even. The transducers are mounted on the same side of the pipe. Correct positioning of the transducers is easy.

- **diagonal arrangement**

The number of sound paths is odd. The transducers are mounted on opposite sides of the pipe. In the case of a high signal attenuation by the fluid, pipe and coatings, diagonal arrangement with 1 sound path will be used.

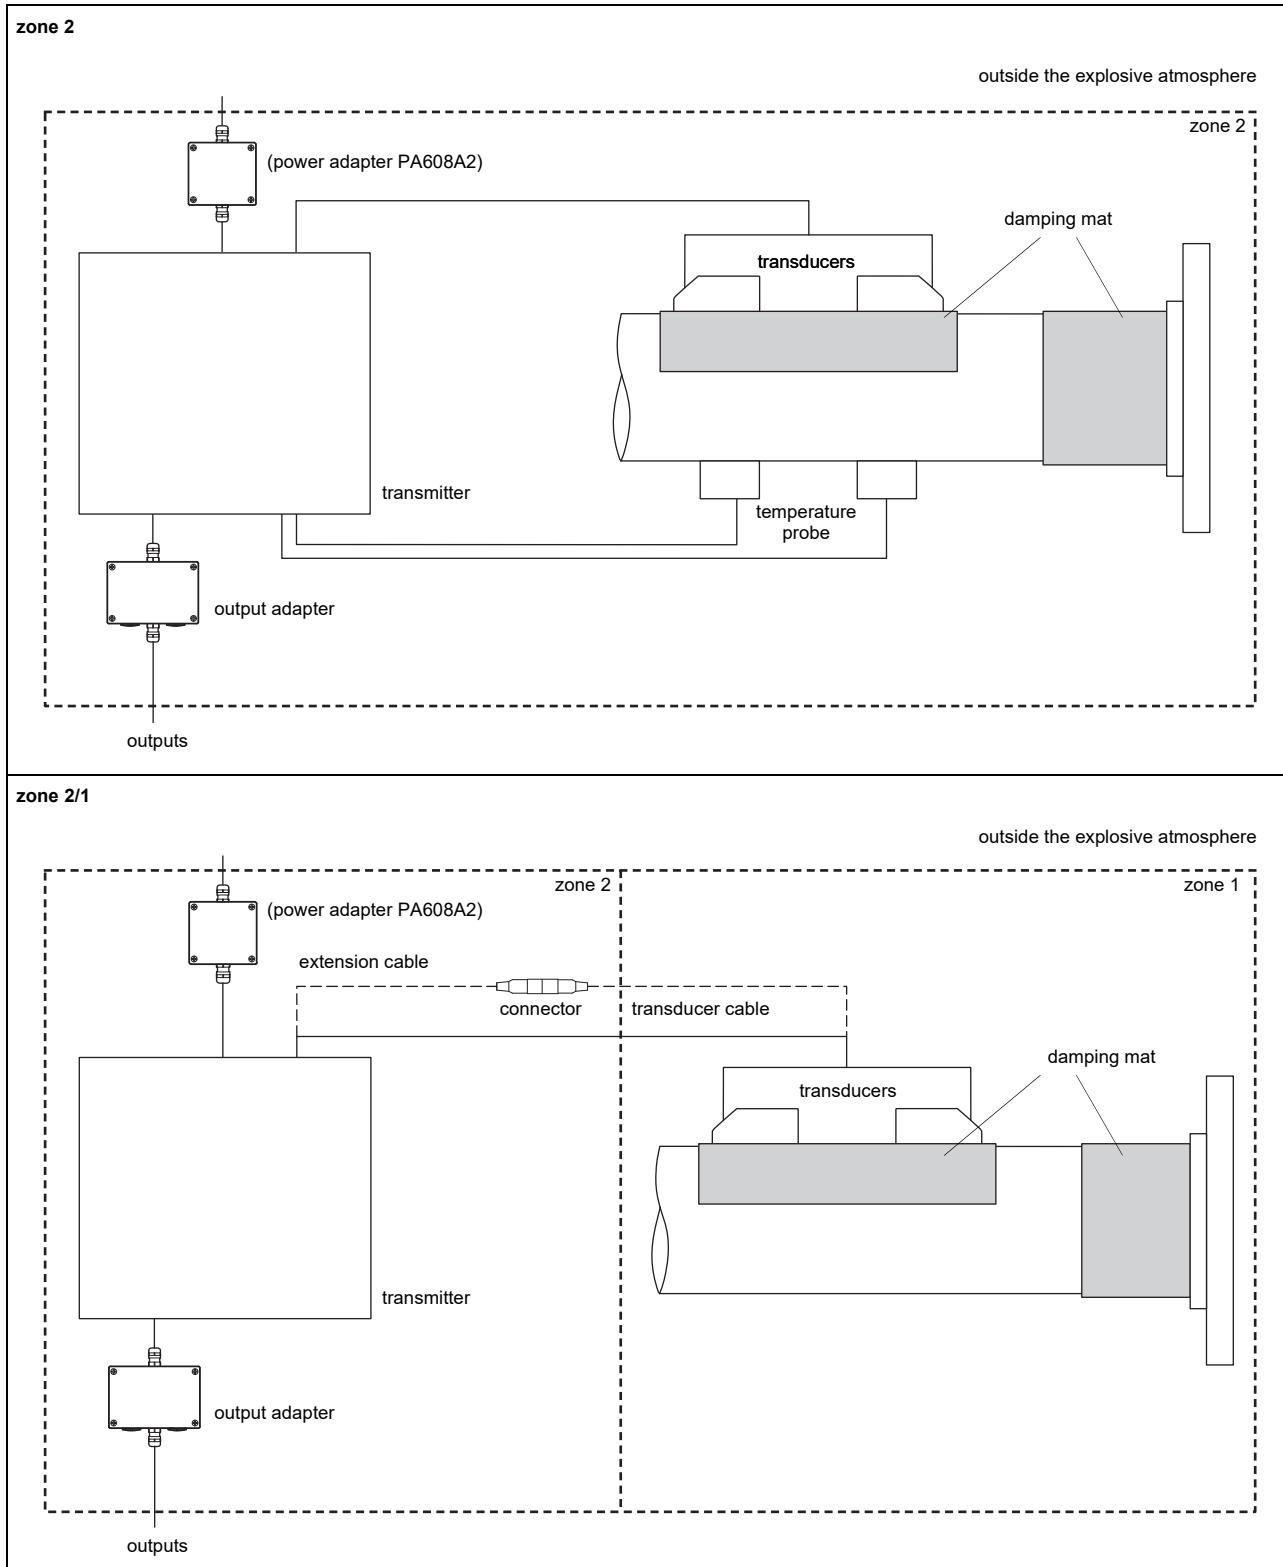

The preferred method of installation depends on the application. While increasing the number of sound paths increases the accuracy of the measurement, signal attenuation increases as well. The optimum number of sound paths for the parameters of the application will be determined automatically by the transmitter.

As the transducers can be mounted with the transducer mounting fixture in reflection arrangement or diagonal arrangement, the number of sound paths can be adjusted optimally for the application.

## Transducers

### Transducer selection (gas measurement)

#### Step 1a

Select a Lamb wave transducer:

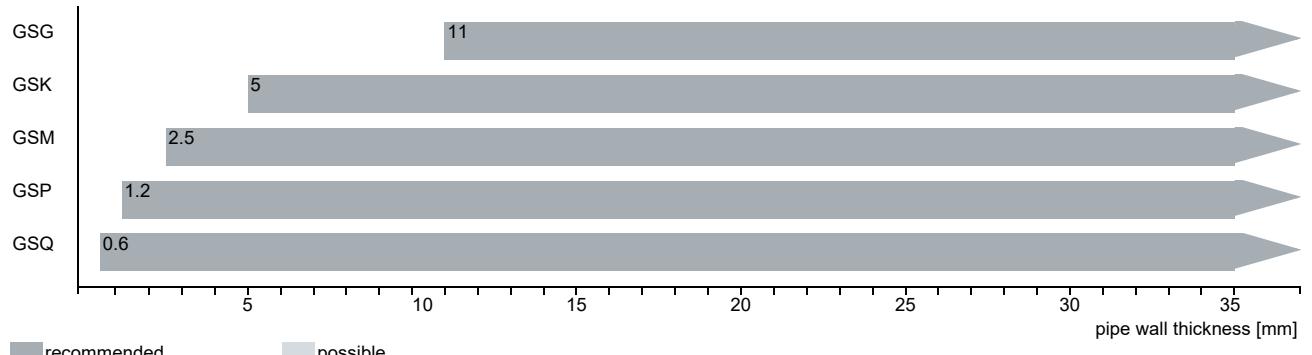

transducer order code

#### Step 1b

If the pipe wall thickness is not in the range of the Lamb wave transducers, select a shear wave transducer:

transducer order code

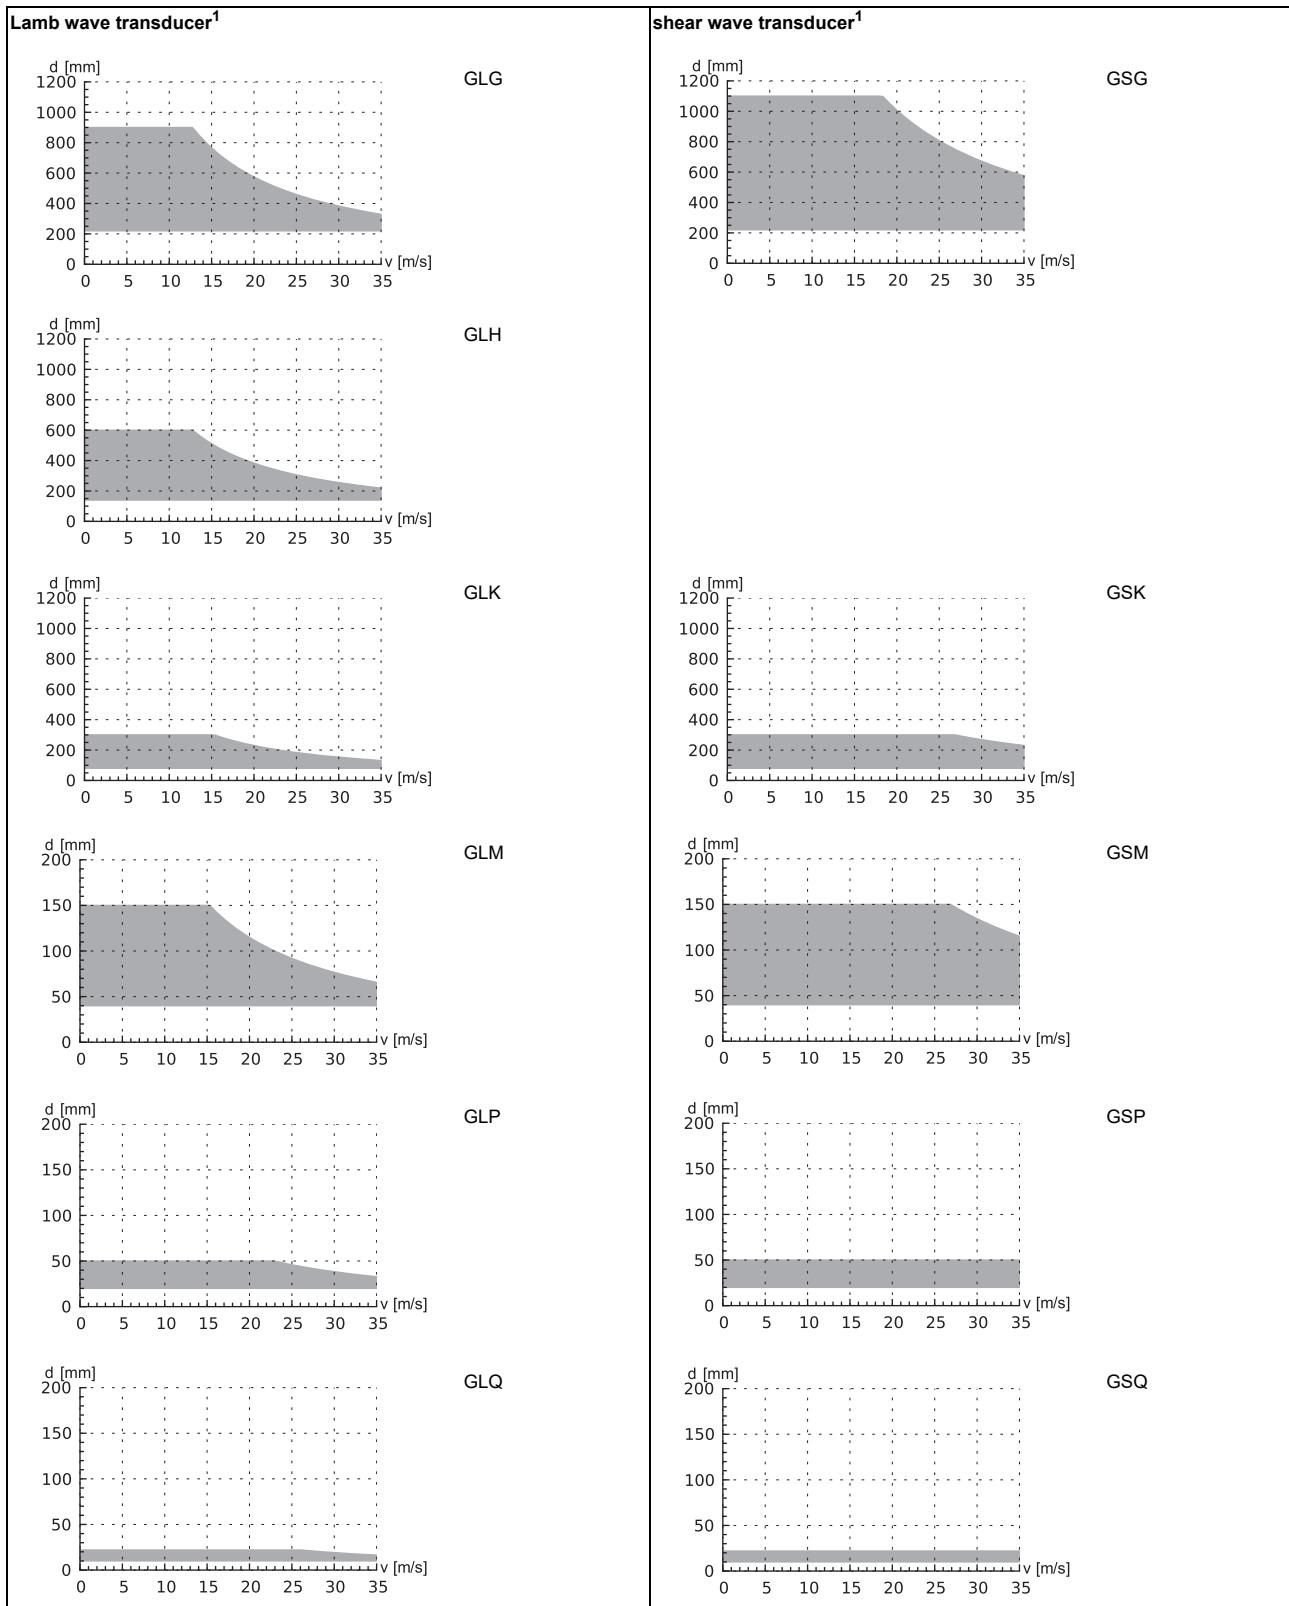

#### Step 2

inner pipe diameter  $d$  dependent on the flow velocity  $v$  of the fluid in the pipe

The transducers are selected from the characteristics (see next page). Lamb wave transducers are selected from the left column, shear wave transducers from the right column.

Lamb wave transducers: If the values  $d$  and  $v$  are not in the range, the diagonal arrangement with 1 sound path may be used, i.e. the same characteristics can be used with doubling the inner pipe diameter. If the values are still not in the range, shear waves transducers regarding the pipe wall thickness have to be selected in step 1b.

<sup>1</sup> inner pipe diameter and max. flow velocity for a typical application with natural gas, nitrogen, oxygen in reflection arrangement with 2 sound paths (Lamb wave transducers)/1 sound path (shear wave transducers)

**Step 3**

min. fluid pressure

portable Variofix VP and chains

material: stainless steel 304 (1.4301),  
301 (1.4310), 303 (1.4305)  
dimensions: 414 x 94 x 76 mm  
chain length: 2 m

## Coupling materials for transducers

normal temperature range (4th character of transducer order code = N)		extended temperature range (4th character of transducer order code = E)		higher temperatures (4th character of transducer order code = S)
< 100 °C	< 170 °C	< 150 °C	< 200 °C	< 180 °C
coupling compound type N	coupling compound type E	coupling compound type E	coupling compound type E or H	coupling compound type E <sup>1</sup> and coupling foil type VT

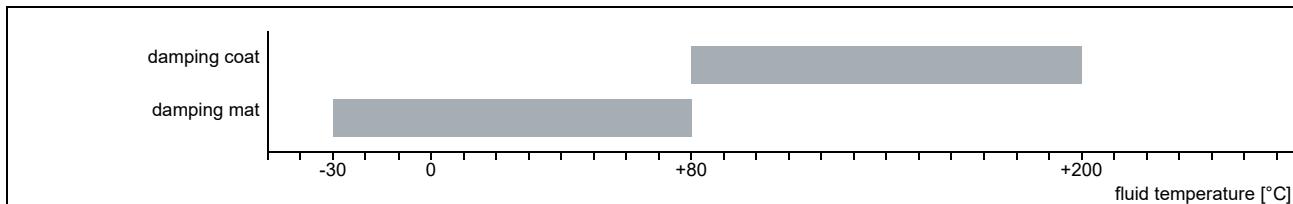

<sup>1</sup> in combination with type VT only

### Technical data

type	ambient temperature °C
coupling compound type N	-30...+130
coupling compound type E	-30...+200
coupling compound type H	-30...+250
coupling foil type VT	-10...+200

## Damping material (optional)

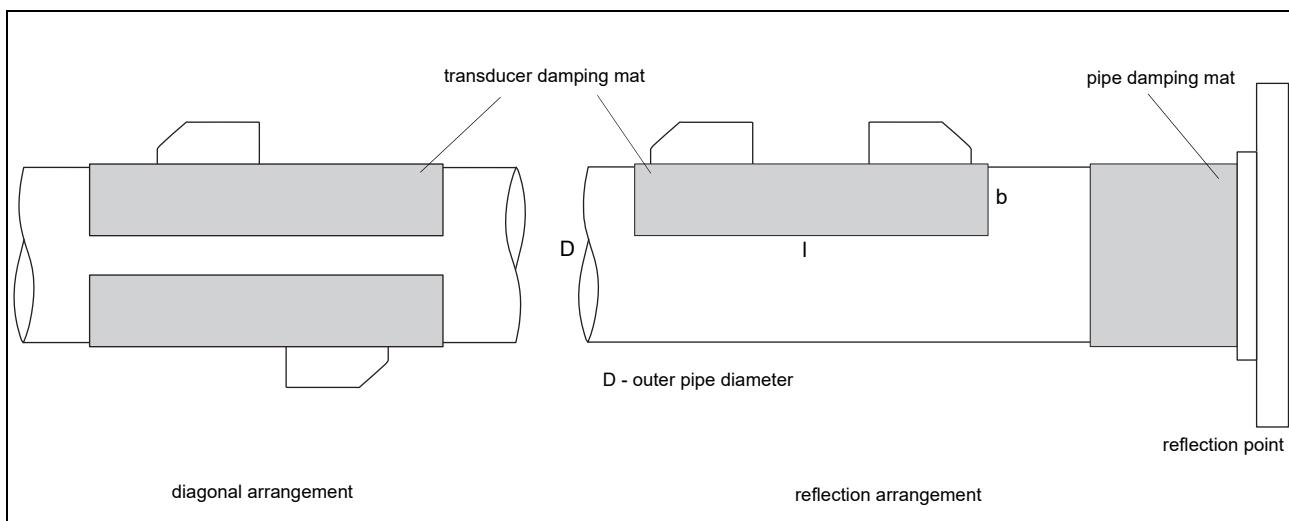

Damping material will be used for the gas measurement to reduce acoustic noise influences on the measurement.

## Damping mats

Transducer damping mats will be installed below the transducers.

Pipe damping mats will be installed at reflection points, e.g. flange, weld.

## Selection of damping mats

type	description	outer pipe diameter mm	dimensions I x b x h mm	transducer frequency F   G   H   K   M   P   Q	technical type	ambient temperature °C	remark
<b>transducer damping mat</b>							
D	for temporary installation (multiple use), fixed with coupling compound	< 80	450 x 115 x 0.5	- - - - x x x	D20S3	-25...+60	
		≥ 80	900 x 230 x 0.5	- - - x x - -	D20S2		
			900 x 230 x 1.3	x x x - - -	D50S2		
<b>pipe damping mat</b>							
A	for temporary installation (multiple use), fixed with coupling compound	< 300	300 x 115 x 0.5	x x x x x x x	A20S4	-25...+60	for quantity see table below
B	self-adhesive	≥ 300	I x 100 x 0.9	x x x x x x -	B35R2	-35...+50	I - see table below

## Quantity for pipe damping mat - type A

(depending on outer pipe diameter)

outer pipe diameter D mm	transducer frequency F, G, H	K, M, P, Q
100	12	6
200	24	12
300	32	16

## Length of pipe damping mat - type B

(length I depending on transducer frequency and outer pipe diameter)

outer pipe diameter D mm	transducer frequency F, G, H m	K, M, P m
300	12	6
500	32	16
1000	126	63

## Damping coat

For high temperatures it is recommended to apply the damping coat onto the pipe. In case of steam measurement it is mandatory.

## Technical data

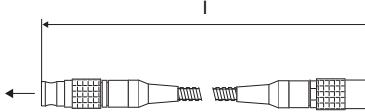

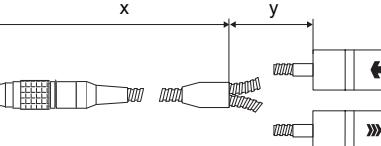

order code	ACC-PE-GNNN-/DPL1	
material	multipolymeric matrix/inorganic ceramic coating	
packing drum	I	1
properties	heat resistant, inert	

Observe installation instructions (TI\_DampingCoat).

## Dimensioning

## Fixation

<b>tension strap PT12N</b>		material: stainless steel 301 (1.4310), 410 (1.4006) thermal insulation necessary
<b>ball chain PT12F</b>		material: stainless steel 316L (1.4404) length: 1 m

## Wall thickness measurement (optional)

The pipe wall thickness is an important pipe parameter which has to be determined exactly for a good measurement. However, the pipe wall thickness often is unknown.

The wall thickness probe can be connected to the transmitter instead of the flow transducers and the wall thickness measurement mode is activated automatically.

Acoustic coupling compound is applied to the wall thickness probe which then is placed firmly on the pipe. The wall thickness is displayed and can be stored directly in the transmitter.

## Technical data

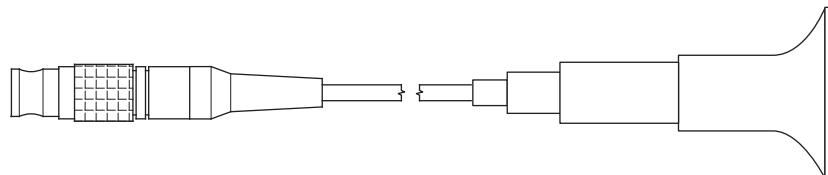

<b>DWR1NZ7</b>	
order code	ACC-PO-G601-/W6
measuring range <sup>1</sup>	mm 1...250
resolution	mm 0.01
accuracy	1 % ±0.1 mm
fluid temperature	°C -20...+200, short-time peak max. 500
explosion protection	-
<b>cable</b>	
type	2616
length	m 1.5

<sup>1</sup> The measuring range depends on the attenuation of the ultrasonic signal in the pipe. For strongly attenuating plastics (e.g. PFA, PTFE, PP) the measuring range is smaller.

## Cable

<b>2616</b>	
ambient temperature	°C <200
<b>cable jacket</b>	
material	FEP
outer diameter	mm 5.1
colour	black
shield	x
