

TECHNICAL DATASHEET

The TRICOR PRO series offers robustness and excellent performance combined with state-of-the-art diagnostic functionality. An HMI interface provides traceable logging of all relevant device data. With the advanced DSP transmitter, powerful analysis is provided in addition to systematic menu navigation for parameter setting.

- TCD 9000 transmitter with digital signal processing and extended diagnostic functionality
- Suitable for demanding measurement applications
- Traceable logging of all setting parameters
- Output of the concentration of two-phase mixtures

DESCRIPTION

The TCMP PRO product line with extended diagnostic functionalities addresses challenging measurement requirements. The transmitters of the TCD 9000 series are characterized above all by great robustness and performance. Their technology platform offers a wide range of interfaces. Thus, the TCD 9000 series is prepared for today's and future industrial standards to be seamlessly integrated into logic control and distribution control systems.

TRICOR Coriolis mass flow meters of the PRO series extend the sensors already known from the CLASSIC series with the latest digital signal processing. With our well-known sensors, which are characterised by a high variance of process connections and pressure levels, we combine flexible sensor technology with the latest processor technology. An improved signal-to-noise ratio is particularly evident in the application's limit ranges. Reliable, high measuring accuracy and increased reproducibility with extended flow dynamics are the result.

FEATURES

- Digital Signal Processing:
 - Short response time to rapid flow changes, 100 Hz update rate, response time ≤ 10 ms
 - Improved signal to noise ratio
 - Extended diagnostic functionality
- Ease of Use:
 - Integrated SD card with memory function¹⁾, guarantee of traceability
 - Modular universal I/O configuration
 - Modern, adaptable displays, 6 views and Trend curves
 - Damping functionality for pumps
 - Error monitoring
- Integrated fractionation tables (expandable to customer-specific liquids)
- Password protection (multi-level)
- Multi-voltage power supply unit for AC and DC
- DAkkS accreditation as per DIN EN ISO/IEC 17025:2018
- Customer-specific process connections available

ADDITIONAL OPTIONS

- Multiple protocols supported : Modbus, HART®, Profibus DP, Profibus PA
- Available as meter mount and remote versions
- Calibration maintenance services
- Tailored customer solutions
- DAkkS accreditation as per DIN EN ISO/IEC 17025:2018

PRINCIPLE OF OPERATION

Coriolis Mass Flow Meters (TCMP) operate with two parallel tubes with coils that cause them to oscillate at their resonance frequency. Should a measurement flow enter the measuring tube, Coriolis forces are the result. Coriolis forces appear in oscillating systems when a mass moves towards or away from a rotational axis. These forces act on the inlet and outlet side in the opposite direction and minimally deform the measuring tubes. The deflection of the measurement tubes is captured by sensors on the inflow and outflow side. These two sensors measure a phase shift that is proportional to the mass flow. The resonance frequency of the tubes varies depending on the density of the medium to be measured. This effect is used to measure the density of the medium. Since the elastic properties of the flow tubes depend on the temperature, a temperature measurement is carried out for compensation. The primary characteristics such as mass flow rate, density and temperature are measured with a single flow meter. The volume flow can be determined based on the mass flow rate and density.

Calibration for Liquids and Gases: The TRICOR flowmeters are always factory calibrated with water.

Calibration Conditions: Water: 20 °C ... 25 °C [68 °F ... 77 °F], ambient temperature: 20 °C ... 25 °C [68 °F ... 77 °F].

All specifications are based on above mentioned calibration reference conditions, a flow calibration protocol is attached to each instrument.

Stated accuracy combines the effects of repeatability, linearity and hysteresis.

Typical flow dynamics based on max. flow rate is 100:1.

Max. allowed flow velocity (Ma 0.5).

For gas applications, flow rate and pressure drop for individual sensor sizes are dependent on operating temperature, pressure and fluid composition. Therefore, when selecting a sensor for any particular gas application, please use the the TSP (TRICOR Sizing Program) or contact us.

²⁾ Nominal flow rates that produce approximately 3 bar [43 psi] pressure drop for natural gas at 50 bar [725 psi] operational pressure.

³⁾ Normal reference conditions (Nm³/h) are 1,013 bar und 0 °C. Standard (SCFM) reference conditions are 14.7 psi und 60 °F.

⁴⁾ Flow rate and density range depend on the gas density and the pressure range.
